

Works with
Apple HomeKit

PowerView®

ENABLING APPLE HOMEKIT QUICK START GUIDE

Before You Begin:

In order to enable Apple® HomeKit™, you'll need:

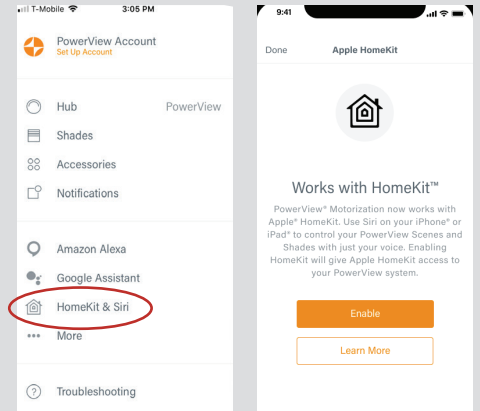

- A PowerView® Hub, Gen 2, updated with the latest firmware
- A HomeKit setup code (located on the bottom of the PowerView Hub)
- An iPhone® or iPad® with the latest version of iOS
- The Apple Home app downloaded and installed on your iPhone or iPad

Tips

- Use of the PowerView Remote to control PowerView shades integrated with Apple HomeKit is not recommended. For optimal system performance, the Apple Home app, PowerView® App and Scene Controller are the recommended control options.
- Complete all Shade, Room and Scene configuration in the PowerView App prior to enabling HomeKit and using the Home app.
- If any changes to Shade and/or Scene information are made in the Apple Home app, you may need to confirm those changes and resolve any conflicts the next time you open the PowerView App.
- Once HomeKit is enabled, it is recommended that the user who added the PowerView Hub to their HomeKit home share access with family members using the Home app. This ensures everyone in the home can use Siri, and that all changes stay in sync.

- 1 **Open the PowerView App on your iPhone or iPad, access the menu and select HomeKit & Siri.**

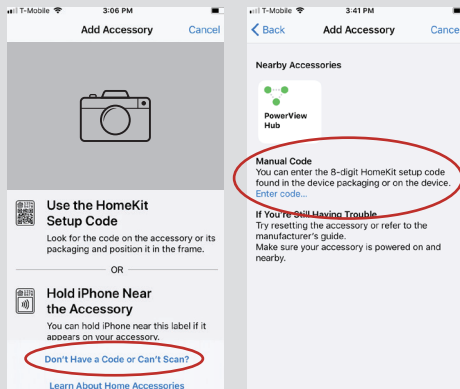

Select Enable.

- 3 **Locate the setup code on the bottom of the PowerView Hub and enter it as indicated.**

- 2 **Select the option to manually enter the HomeKit setup code.**

- 4 **Keep the default settings shown for your Hub and all accessories. PowerView will automatically sync your settings with HomeKit in the next step.**

- 5 **Follow the steps in the PowerView App to complete the integration. You will:**
 - a. Add your PowerView Hub and Shades to HomeKit as accessories.
 - b. Synchronize all Shade, Room and Scene data between the PowerView and Apple Home apps.
